

When the trunk floor has a strap, go to the step 2 shown below. When the trunk floor does not have a strap, go to the step 5 on page 3.

2. Mark the trunk tray in the positions shown using a felt-tip pen.

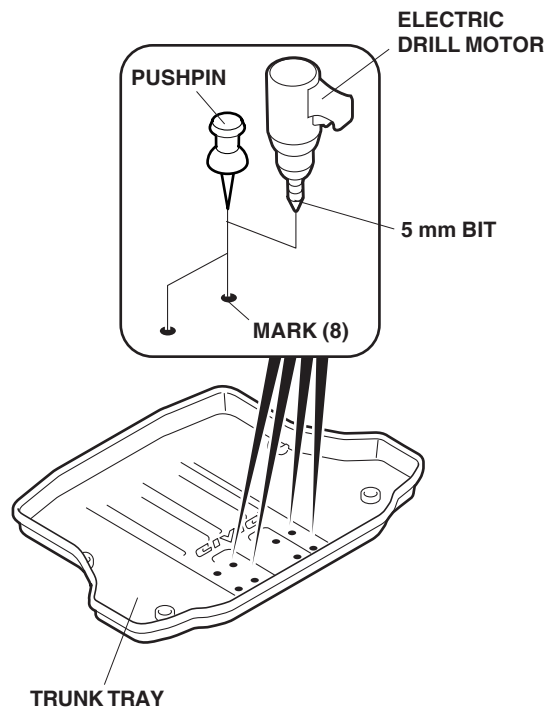

4-door car with TEMP tire:

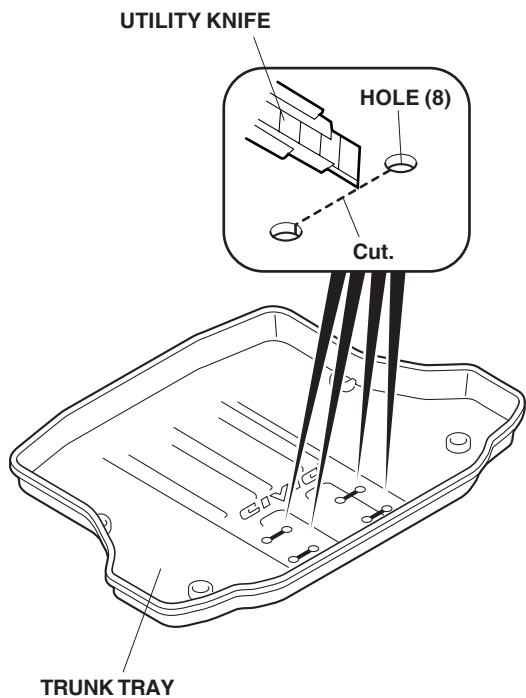

2-door car:

3. Using a pushpin, pierce at the eight marks you made on the trunk tray in the step 2. Drill the trunk tray at the pierced points using an electric drill motor with 5 mm bit. Remove the burrs from the edge of the holes.

4. Using a utility knife, cut the trunk tray straight in the part between each of a pair of the holes you just drilled as shown.

5. Place the trunk tray on the trunk floor.
- When both the trunk tray and cargo net are mounted on the car, align the hooks of the cargo net with the holes in the trunk tray.
 - When the trunk floor has a strap, pass the strap through the slit you made in the trunk tray.
